

GEARBOX

G11

Carbon & Glass Fiber using Solid Span Technology, that replaces the traditional honeycomb core structure with a composite rib and chamber structure at the core of the paddle, yielding a super strong, exciting paddle. Single piece molded construction. Handle 3 5/8" - 3 15/16"

MOLDED. DURABLE. EDGELESS.

The G11 is one of the most technologically advanced paddles available today. It features Gearbox's Patent Pending Solid Span Technology. The G11 is crafted using hand laid, advanced composite materials giving it excellent durability and quality. The G11 provides a soft feel for touch shots at the kitchen while giving plenty of pop when needed for an overhead slam, poach, or shots from the baseline. This is an exceptional all around paddle. Its durable edgeless frame provides an extra large "sweet spot" improving shot accuracy.

Please refer to my comments on the GX5 for an overall introduction to both the G11 and GX5. I found both paddles to have very similar feel and playability. If you prefer the more standard square shape over the teardrop shape of the Pro, then you should test both the G11 and the GX5 to determine which works better for your style of play.
