

GEARBOX

PRO 7 (7OZ) & PRO 8 (8 OZ)

MOLDED. DURABLE.
EDGELESS.

This new PRO model features an edgeless Teardrop shape. The Teardrop shape gives this paddle quickness, superb maneuverability, and control. New to the line is Gearbox's latest technologies including a Softer Sound, Softer Feel and Hyper Bite Spin Technology, for that extra edge against your opponent. The paddle handle feels natural in the hand with a very comfortable grip shape.

Carbon Fiber Core with Unidirectional Graphite/Woven Fiberglass Face. Solid Span Technology, replacing the traditional honeycomb core structure with a composite rib and chamber structure at the core of the paddle, yielding a super strong, exciting paddle.

This is the original Teardrop introduced by Gearbox in 2015, now updated and improved with a softer sound and feel, as well as HyperBite technology and a larger sweet spot. The teardrop shape tends to move the sweet spot a bit higher on the paddle, improving results on high-center hits. If you're like me, check your current paddle to see how often you engage the ball high on the paddle face. You might be surprised! I found the paddle shape to have exceptional maneuverability. Was definitely able to react quickly to unanticipated directional changes when preparing to return. The Seven is a bit on the light side, for me, but might be just what you're looking for to sharpen your reaction times. The Eight is a solid, traditional weight that should feel comfortable for most players.
