

GEARBOX

GX5 SST

MOLDED. DURABLE.
EDGELESS.

The GX5 features a Quadraform shaped head to give you precise control. It also includes patent pending Solid Span Technology, giving this paddle Optimal Power, a Softer Feel, a Softer Sound, a Durable Edgeless Rim and a Massive Sweet Spot. For extra spin on the ball, the GX5 includes All-New Hyper-Bite Spin Technology! The paddle handle feels natural in the hand with a very comfortable grip shape.

Carbon Fiber using Solid Span Technology, that replaces the traditional honeycomb core structure with a composite rib and chamber structure at the core of the paddle, yielding a super strong, exciting paddle.

Single piece molded construction.

Handle 3 5/8" - 3 15/16".

The GX5 sports a more traditional shape, which I initially found more comfortable than the teardrop shape of the Pro. It provides plenty of pop on groundstrokes, and I found ramping up the speed of my serves, while keeping them low, was a definite plus with this model. Took a while to get used to dinking with this paddle, but it does produce consistent dinks with less surprise "pop-ups." It is definitely maneuverable, which I believe is a result of the narrower racquetball-type grip and balance of the paddle. The one area I found challenging with this paddle, was slowing down the point and taking pace off attacking shots. Gearbox SST design offers a clear alternative to the more pervasive honeycomb core paddle. You will feel a marked difference. Whether that difference works for you will probably require an extended and patient test drive.
